

**2021-2022 #2**

Last Wednesday we had the online ISE Open House. Online Open House allowed parents and students to see and hear from their teachers regarding topics such as class expectations, procedures, important contacts, and subjects programs.

Normally, Open House is a school event where parents have the opportunity to walk around the school, and meet teachers along with other parents. This year we had to experience doing it through ZOOM, and we hope you've received enough information of new school year. For any individual concerns do not be hesitant to contact the school and book an appointments.

### G1 & 2

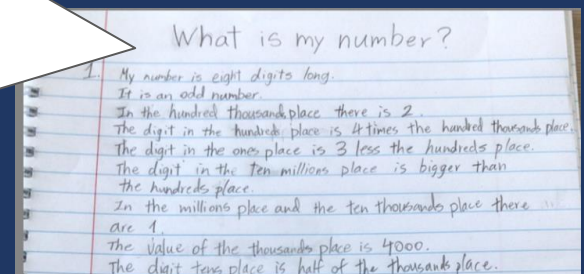

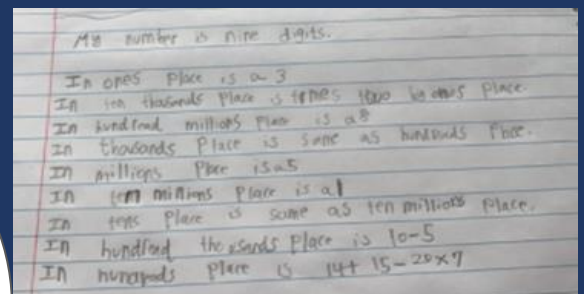

We share our thoughts and opinions. This week we looked at things that we are grateful for. Students have shared that **they are grateful to their parents** for working to take care of them, grateful for their house that keeps them safe, and grateful for being born.

### Math

### G5

We have been studying **place value** and thinking about **numbers**, how to read and write them, and understand values of particular digits.

Students were asked to pick a number and then **create a riddle** that describes the various place values in a cryptic form.

G6

Take a close look to see who visited us during math!

The third week of 6th Grade HAS us with good books in our hands to read and serious note-taking skills being used in math class.

PE

G6, 7 & 8

Students in Middle School have been exploring the **'Components of Fitness'** this week and have been designing their own fitness programs. Students have further their knowledge of the fitness components before designing exercises that will target and improve each of the components.

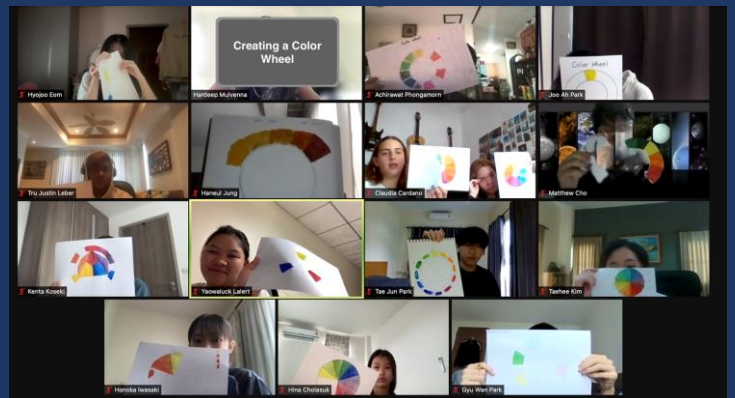

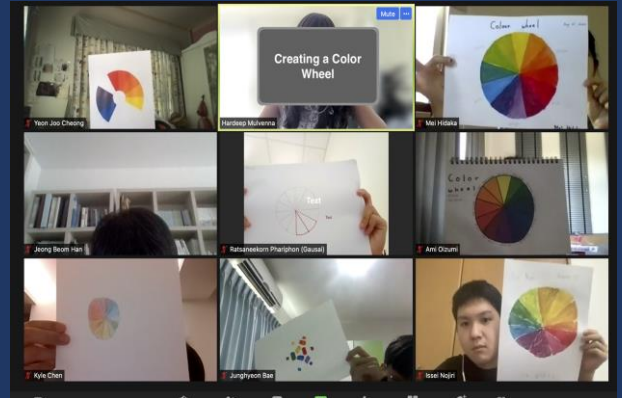

# High School

# Art and Design

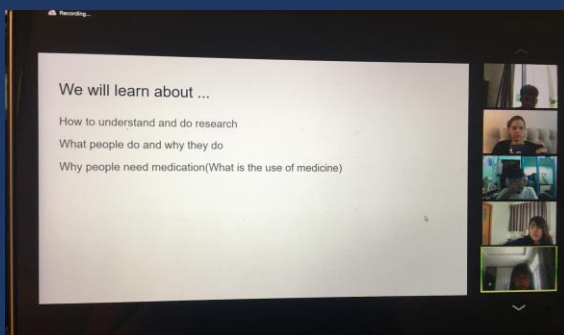

G9 & 10

Media Art Design students were introduced to a **Color Wheel** last week. The color wheel is a tool used in color theory that helps them understand the relationships between individual colors in order to use them well.

# IB Psychology

G11

The grade 11 Psychology students made use of an approach to learning technique called previewing. The students researched a bit about the topics that we will cover in this two year course. They presented their findings and engaged the other students in a discussion on those topics. The questions focused on **what they already know or think about the topic** and **what they want to learn**.
